

COMP 122/L Lecture 3

Kyle Dewey

Outline

- Operations on binary values
 - Addition
 - Subtraction
- Floating point introduction

Addition

Building Up Addition

- Question: how might we add the following, in decimal?

$$\begin{array}{r} 986 \\ +123 \\ \hline \end{array}$$

?

Building Up Addition

- Question: how might we add the following, in decimal?

$$\begin{array}{r} 986 \\ +123 \\ \hline \end{array}$$

?

			$\begin{array}{r} 6 \\ +3 \\ \hline \end{array}$
--	--	--	--

Building Up Addition

- Question: how might we add the following, in decimal?

$$\begin{array}{r} 986 \\ +123 \\ \hline \end{array}$$

?

$$\begin{array}{r} 8 \\ +2 \\ \hline \end{array}$$

?

$$\begin{array}{r} 6 \\ +3 \\ \hline \end{array}$$

9

Building Up Addition

- Question: how might we add the following, in decimal?

$$\begin{array}{r} 986 \\ +123 \\ \hline \end{array}$$

?

Carry: 1

$$\begin{array}{r} 8 \\ +2 \\ \hline 0 \end{array}$$

$$\begin{array}{r} 6 \\ +3 \\ \hline 9 \end{array}$$

Building Up Addition

- Question: how might we add the following, in decimal?

$$\begin{array}{r} 986 \\ +123 \\ \hline \end{array}$$

?

$$\begin{array}{r} 1 \\ 9 \\ +1 \\ \hline \end{array}$$

?

$$\begin{array}{r} 8 \\ +2 \\ \hline \end{array}$$

0

$$\begin{array}{r} 6 \\ +3 \\ \hline \end{array}$$

Building Up Addition

- Question: how might we add the following, in decimal?

$$\begin{array}{r} 986 \\ +123 \\ \hline \end{array}$$

?

Carry: 1

$$\begin{array}{r} 1 \\ 9 \\ +1 \\ \hline 1 \end{array}$$

$$\begin{array}{r} 8 \\ +2 \\ \hline 0 \end{array}$$

$$\begin{array}{r} 6 \\ +3 \\ \hline 9 \end{array}$$

Building Up Addition

- Question: how might we add the following, in decimal?

$$\begin{array}{r} 986 \\ +123 \\ \hline \end{array}$$

?

$$\begin{array}{r} 1 \\ +0 \\ \hline 1 \end{array}$$

$$\begin{array}{r} 1 \\ 9 \\ +1 \\ \hline 1 \end{array}$$

$$\begin{array}{r} 8 \\ +2 \\ \hline 0 \end{array}$$

$$\begin{array}{r} 6 \\ +3 \\ \hline 9 \end{array}$$

Core Concepts

- We have a “primitive” notion of adding single digits, along with an idea of *carrying* digits
- We can build on this notion to add numbers together that are more than one digit long

Now in Binary

- Arguably simpler - fewer one-bit possibilities

0	0	1	1
+0	+1	+0	+1
--	--	--	--
?	?	?	?

Now in Binary

- Arguably simpler - fewer one-bit possibilities

0	0	1	1
+0	+1	+0	+1
--	--	--	--
0	1	1	0
			Carry: 1

Chaining the Carry

- Also need to account for any input carry

$\begin{array}{r} 0 \\ 0 \\ +0 \\ \hline 0 \end{array}$	$\begin{array}{r} 0 \\ 0 \\ +1 \\ \hline 1 \end{array}$	$\begin{array}{r} 0 \\ 1 \\ +0 \\ \hline 1 \end{array}$	$\begin{array}{r} 0 \\ 1 \\ +1 \\ \hline 0 \end{array} \text{ Carry: 1}$
$\begin{array}{r} 1 \\ 0 \\ +0 \\ \hline 1 \end{array}$	$\begin{array}{r} 1 \\ 0 \\ +1 \\ \hline 0 \end{array} \text{ Carry: 1}$	$\begin{array}{r} 1 \\ 1 \\ +0 \\ \hline 0 \end{array} \text{ Carry: 1}$	$\begin{array}{r} 1 \\ 1 \\ +1 \\ \hline 1 \end{array} \text{ Carry: 1}$

Adding Multiple Bits

- How might we add the numbers below?

$$\begin{array}{r} 011 \\ +001 \\ \hline \end{array}$$

Adding Multiple Bits

- How might we add the numbers below?

$$\begin{array}{r} 0 \\ 011 \\ +001 \\ \hline \end{array}$$

-Need an initial carry-in of zero

Adding Multiple Bits

- How might we add the numbers below?

$$\begin{array}{r} 10 \\ 011 \\ +001 \\ \hline 0 \end{array}$$

-Need an initial carry-in of zero

Adding Multiple Bits

- How might we add the numbers below?

$$\begin{array}{r} 110 \\ 011 \\ +001 \\ \hline 00 \end{array}$$

-Need an initial carry-in of zero

Adding Multiple Bits

- How might we add the numbers below?

$$\begin{array}{r} 0110 \\ 011 \\ +001 \\ \hline 100 \end{array}$$

-Need an initial carry-in of zero

Adding Multiple Bits

- How might we add the numbers below?

-Need an initial carry-in of zero

Another Example

```
  111  
+001  
-----
```

Another Example

$$\begin{array}{r} 0 \\ 111 \\ +001 \\ \hline \end{array}$$

Another Example

$$\begin{array}{r} 10 \\ 111 \\ +001 \\ \hline 0 \end{array}$$

Another Example

$$\begin{array}{r} 110 \\ 111 \\ +001 \\ \hline 00 \end{array}$$

Another Example

-Now we have an output carry bit of 1. What does this mean?

Output Carry Bit Significance

- For unsigned numbers, it indicates if the result did not fit all the way into the number of bits allotted
- May be an error condition for software

Signed Addition

- Question: what is the result of the following operation?

$$\begin{array}{r} 011 \\ +011 \\ \hline \end{array}$$

?

Signed Addition

- Question: what is the result of the following operation?

$$\begin{array}{r} 011 \\ +011 \\ \hline 0110 \end{array}$$

-If these are treated as signed numbers in two's complement, then we need a leading 0 to indicate that this is a positive number

-Truncated to three bits, the result is a negative number!

Overflow

- In this situation, *overflow* occurred: this means that both the operands had the same sign, and the result's sign differed

$$\begin{array}{r} 011 \\ +011 \\ \hline 110 \end{array}$$

- Possibly a software error

Overflow vs. Carry

- These are **different ideas**
 - Carry is relevant to **unsigned** values
 - Overflow is relevant to **signed** values

111
+001

000

No Overflow;
Carry

011
+011

110

Overflow;
No Carry

111
+100

011

Overflow;
Carry

001
+001

010

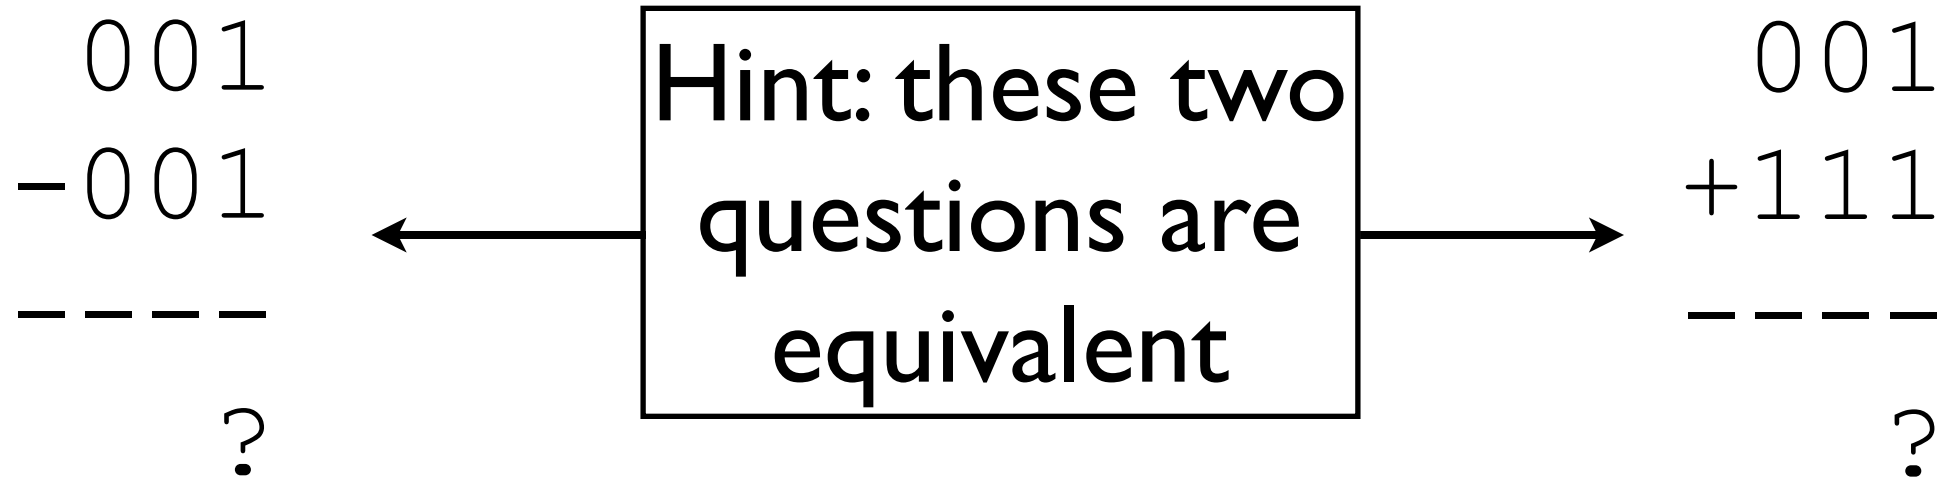

No Overflow;
No Carry

-As to when is it a problem, this all depends on exactly what it is you're doing

Subtraction

Subtraction

- Have been saying to invert bits and add one to second operand
- Could do it this way in hardware, but there is a trick

Subtraction Trick

- Assume we can cheaply invert bits, but we want to avoid adding twice (once to add 1 and once to add the other result)
- How can we do this easily?

Subtraction Trick

- Assume we can cheaply invert bits, but we want to avoid adding twice (once to add 1 and once to add the other result)
- How can we do this easily?
 - Set the initial carry to 1 instead of 0

Subtraction Example

```
  0101  
- 0011  
-----
```

Subtraction Example

0101
-0011

Invert 0011

Subtraction Example

$$\begin{array}{r} 0101 \\ -0011 \\ \hline \end{array} \quad \begin{array}{l} \text{Invert } 0011 \\ \hline \end{array} \quad \longrightarrow \quad 1100$$

Subtraction Example

0101
-0011

Invert 0011

1100

Equivalent to

Subtraction Example

-An initial carry-in of 1 is equivalent to adding 1 and then adding the other operand

Subtraction Example

-An initial carry-in of 1 is equivalent to adding 1 and then adding the other operand

Floating Point Introduction

Question

How might we represent floating point numbers?

1.25

47.9

0.82

- A lot of different ways possible
- A whole lot of problems related to precision arise. Just about any representation devisable will be complex.

Enter IEEE-754

- Standardized floating point representation and operations
- Modern systems all use this
- Complex and *weird*

Enter IEEE-754

- Standardized floating point representation and operations
- Modern systems all use this
- Complex and *weird*

`min(X, Y) =? min(Y, X)`

Enter IEEE-754

- Standardized floating point representation and operations
- Modern systems all use this
- Complex and *weird*

`min(X, Y) =? min(Y, X)`

May or may not be true...

-Standard doesn't enforce that this is true in general. Implementations are permitted to make it so this isn't true in all cases.

Basis

Based on the idea of *scientific notation*

Basis

Based on the idea of *scientific notation*

$$4.23 * 10^7$$

Basis

Based on the idea of *scientific notation*

$$4.23 * 10^7$$

Save these

Basis

Based on the idea of *scientific notation*

$$4.23 * 10^7$$

Save these

Caveat: this is in binary

$$1.1 * 2^{-1}$$

Components

$$1.1 * 2^{-1}$$

- Sign bit (+/-)
- Exponent
- Fraction / mantissa

-We'll get more into representation next class; this is the birds-eye view of how this works for now.
