Abstract Syntax Trees
In Boolean expressions, ¬ has the highest precedence, followed by ∧ and ∨. With this in mind, write out the ASTs corresponding to each of the following Boolean expressions:

1.) ¬a ∧ b ∨ c
2.) (a ∨ b) ∧ c

**3.)** ¬(a ∧ b) ∧ (b ∨ c)
Arithmetic expressions can be used to form Boolean expressions with the help of arithmetic comparisons (e.g., <, <=, >, >=, ==). These comparisons have the lowest possible precedence. With this in mind, write out the ASTs corresponding to each of the following expressions:

4.) `1 * 2 + 3 == 4`

5.) $(2 + 2 < 4) \land \neg a$
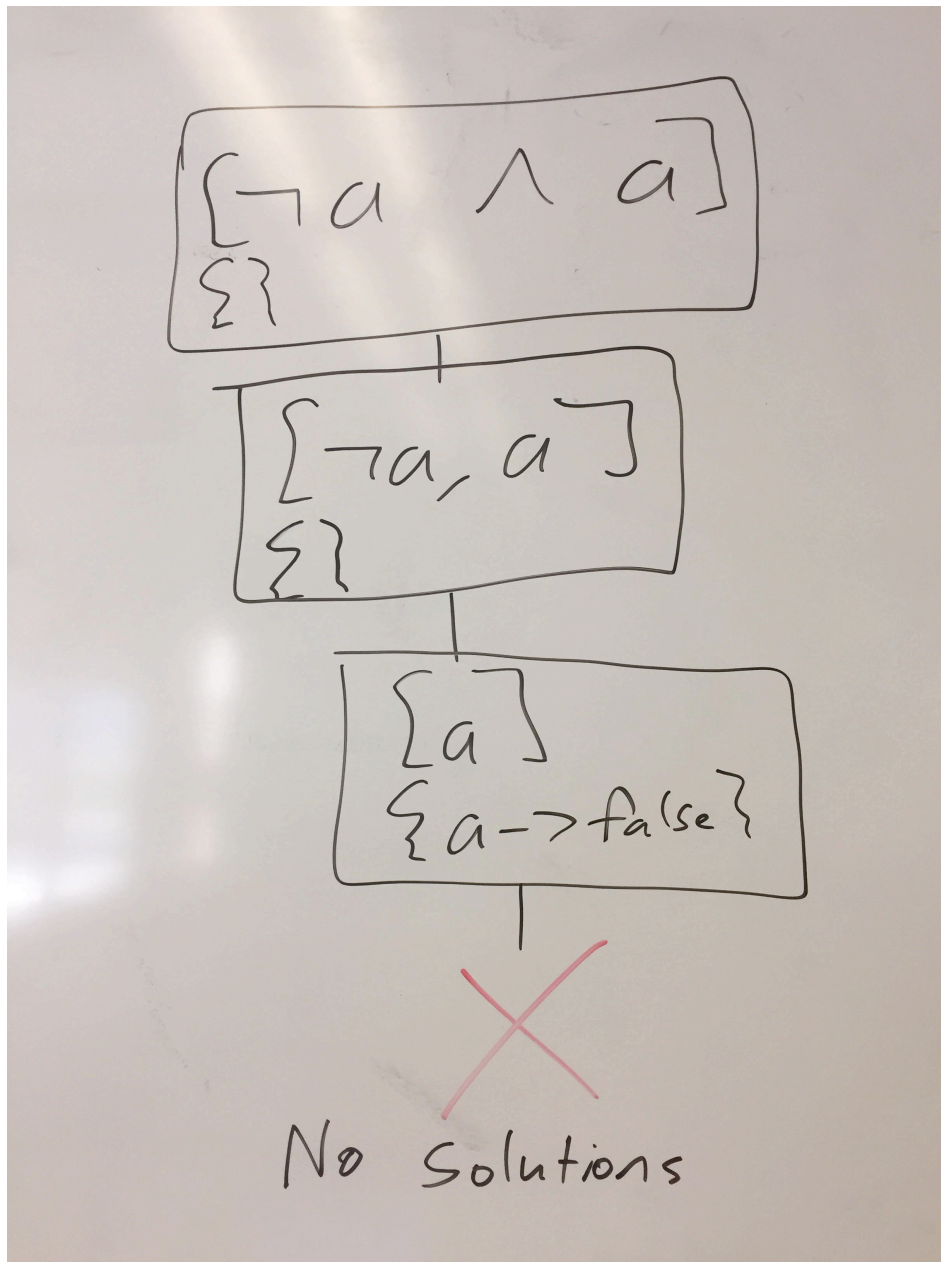

Semantic Tableau

For each of the following Boolean formulas, write out the complete semantic tableau tree. **Circle** the nodes in the tree representing solutions. If a tree has no solutions, say so. **Be sure to write all steps.**

6.) ¬a ∧ a

$$[\neg a \wedge a]$$
$$\{\}$$

$$[\neg a, a]$$
$$\{\}$$

$$[a]$$
$$\{a \rightarrow false\}$$

X

No Solutions

7.) (a ∨ ¬a) ∧ a

[(a ∨ ¬a) ∧ a]
{}

[(a ∨ ¬a), a]
{}

[a, a]
{}

[a]
{a -> true}

[]
{a -> true}

[¬a, a]
{}

[a]
{a -> false}

✗
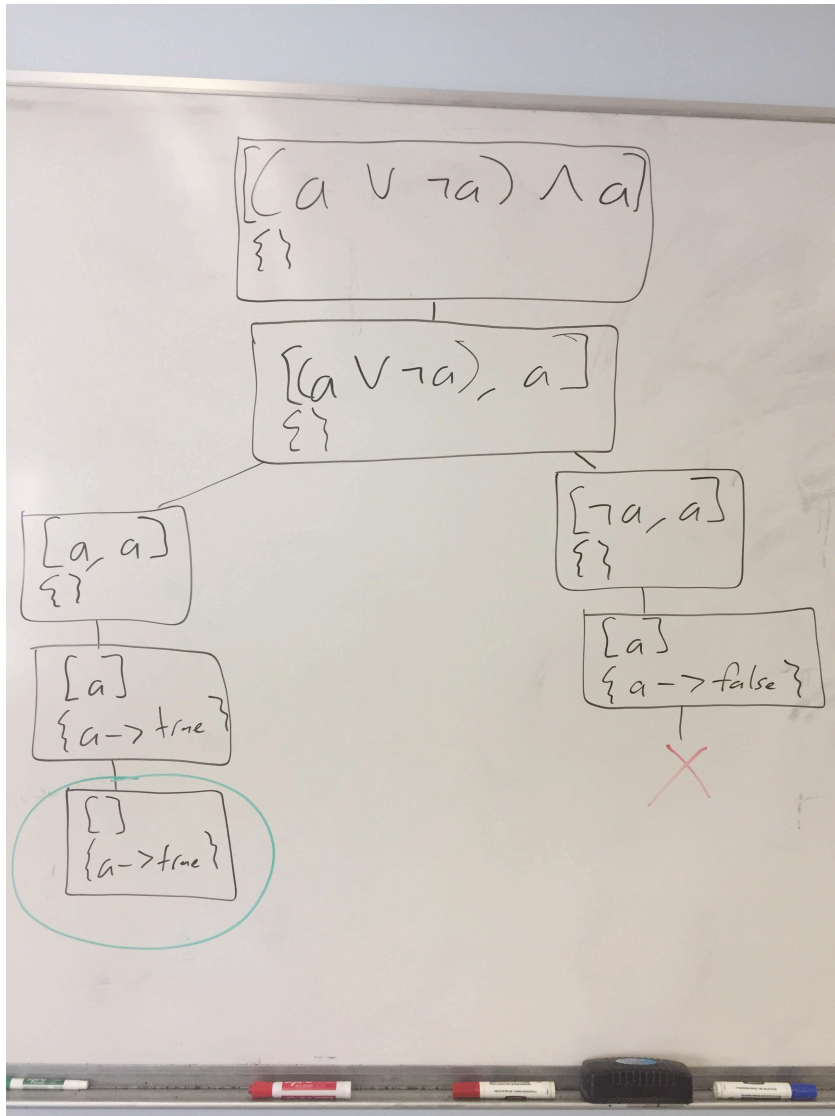

8.) $(\neg x \land \neg y) \lor (x \land y)$
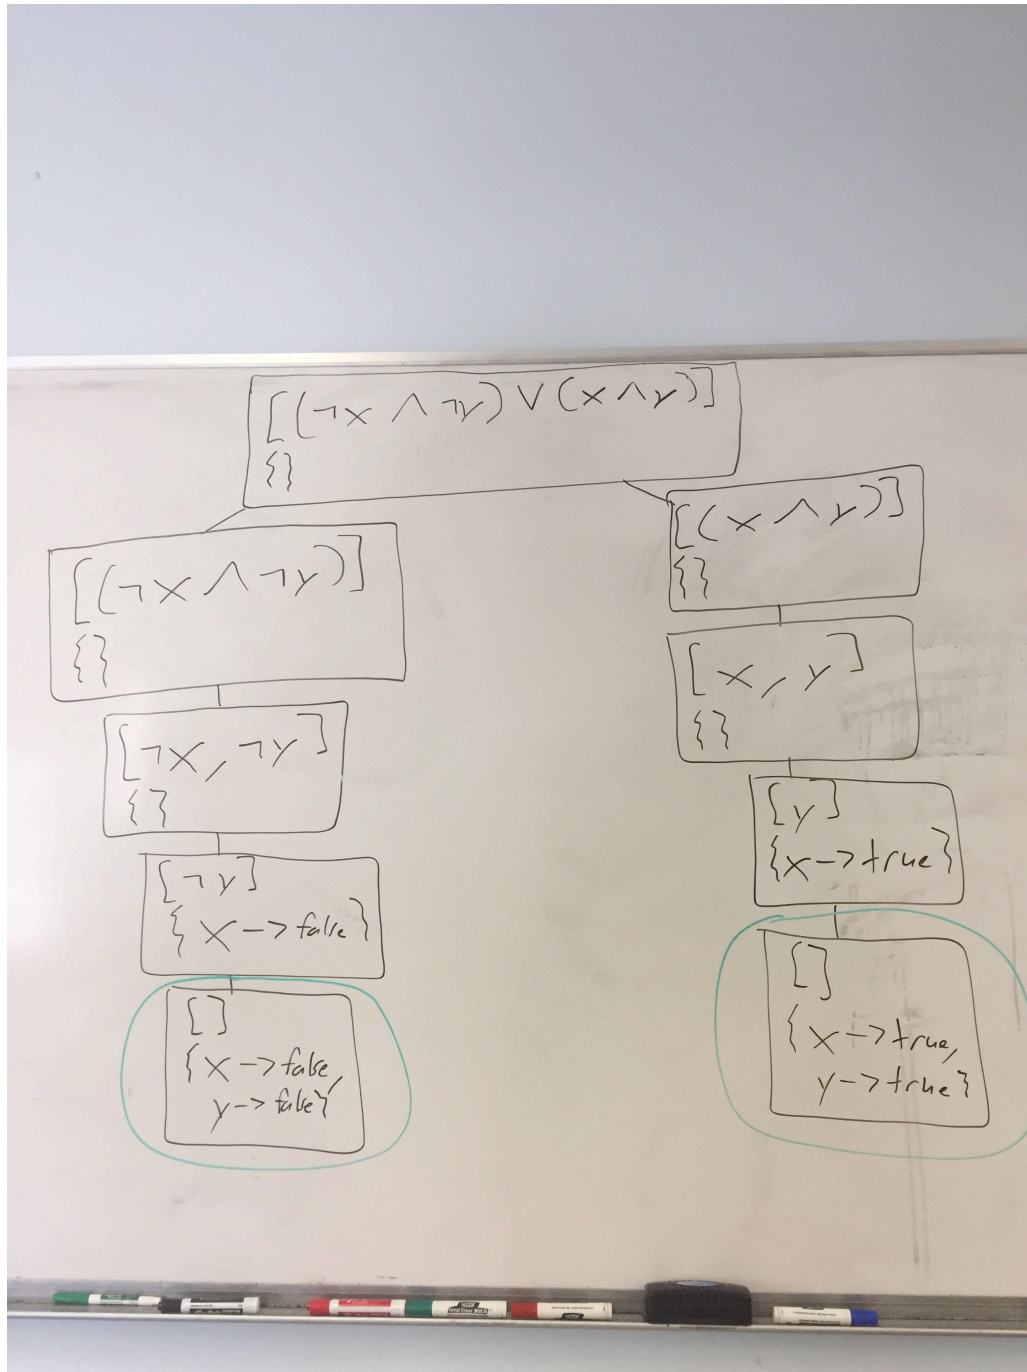

Prolog - Modeling the World

9.a)
For this problem, you need to write a clause database encapsulating pricing information for a convenience store. Write Prolog code accurately reflecting the following:

- Soda costs $2
- Chips cost $3
- Hot dogs cost twice as much as soda (do not hardcode $4)
- Soda chips, and hot dogs are food
- Pencils and pens are office supplies
- All office supplies cost $2
- Cold medicine costs $7

```prolog
% all facts and rules with the same name should be placed
% together in the file
cost(soda, 2).
cost(chips, 3).
cost(hot_dog, Cost) :-
    cost(soda, SodaCost),
    Cost is SodaCost * 2.
cost(OS, 2) :-
    office_supplies(OS).
cost(cold_medicine, 7).

food(soda).
food(chips).
food(hot_dog).

office_supplies(pencil).
office_supplies(pen).
```

Using the clause database you previously wrote, write queries to determine the following:

9.b.) Which items cost exactly $2?

```
?- cost(Item, 2).
```

9.c.) Which items cost more than $3?

```
?- cost(Item, Cost), Cost > 3.
```

9.d.) Which foods cost less than $3?

```
?- food(Food), cost(Food, Cost), Cost < 3.
```

9.e.) Which foods are also office supplies?

```
?- food(Item), office_supplies(Item).
```
