# Project Report Template

**Unit Testing with Sufficient Coverage**
Provide evidence that what you proposed for your unit testing has been done, and that it's getting decent test coverage. This **should** include:

- Direct links (on GitHub) to files that you've modified. This can be both implementation code (if you needed to refactor things) or tests. Explain exactly what you changed in the file.
- Screenshots showing code coverage of the components you've tested.

...for each capability you proposed to test in your proposal.

If you are working on a project that we discussed you'd emphasize automated testing instead, say so here.

**Automated Testing**
Provide evidence that what you proposed for your automated testing has been done. This **should** include direct links, as before. Coverage is also a plus, but it's not required.

If you are working on a project that we discussed you'd emphasize unit testing instead, say so here.

**Lessons Learned**
Knowing what you know now, is there anything you'd do differently if you had to start all over again? Is there anything you'd improve on?
